

Did you know?

Read these interesting facts about water with a parent, carer or teacher.

Over two-thirds of the Earth is covered in water. Water is found in seas, rivers and lakes.

Water can be a liquid. Liquids can be poured into containers.

Water can also be a solid. Solid water is called ice.

Liquid water turns to ice (freezes) when it is very cold. Ice melts when it gets warm and it becomes a liquid again.

Objects either float or sink in water. An object that sinks, falls through the water to the bottom of the container. An object that floats stays at the water's surface.

All living things need to drink water to survive.
